

IN THE UNITED STATES DISTRICT COURT  
FOR THE DISTRICT OF MONTANA  
MISSOULA DIVISION

---

MILDRED E. JOHNSON,

Plaintiff,

-vs-

W. R. GRACE AND COMPANY,

Defendant.

Civil Docket  
No. 88-145-M-HP

COPY

---

TRANSCRIPT OF JURY TRIAL PROCEEDINGS

Heard in the Courtroom  
United States Courthouse  
Missoula, Montana  
August 23, 1990

BEFORE THE HONORABLE HARRY PREGERSON  
UNITED STATES NINTH CIRCUIT COURT JUDGE

TINA C. BRILZ, RPR  
Official Court Reporter  
United States District Court  
301 South Park - Drawer 10122  
Helena, Montana 59626

A P P E A R A N C E S :

PRESENT ON BEHALF OF THE PLAINTIFF, MILDRED E.  
JOHNSON:

MR. THOMAS A. BAIZ, JR.  
Attorney at Law  
600 Central Plaza, Suite 316  
Great Falls, Montana 59401

and

MR. TOM L. LEWIS  
Attorney at Law  
REGNIER, LEWIS & BOLAND  
P.O. Box 2325  
Great Falls, Montana 59403

PRESENT ON BEHALF OF THE DEFENDANT, W. R. GRACE AND  
COMPANY:

MR. GARY L. GRAHAM  
Attorney at Law  
GARLINGTON, LOHN & ROBINSON  
P.O. Box 7909  
Missoula, Montana 59807

1 The following proceedings were had:

2

3 (A jury was duly impaneled and sworn.)

4 (The following proceedings were had in open

5 court, with the jury present, beginning at 10:49 a.m.:)

6 THE COURT: Please be seated. See I have a lap  
7 computer here, and our courts are all tied in with  
8 electronic mail and cover all the western states, so I'm  
9 trying to rig it up here, and we're having problems getting  
10 through and programming it, so my law clerk is working with  
11 someone from San Francisco who's walking him through all  
12 the steps. Once we get it hooked up, then we'll not only  
13 be able to pick up all the mail electronically, but then we  
14 have access to a vast library of books and resources all  
15 through the computer system. It's an amazing gadget when  
16 it works.

17 Now, I'm just going to briefly give you an outline of  
18 how this case is going to proceed. We're going to start by  
19 the Plaintiff through her attorney making an opening  
20 statement. And then the Defendant may make an opening  
21 statement or may reserve making an opening statement until  
22 the Plaintiff puts on its case, probably the Defendant will  
23 make an opening statement at this time.

24 Now, opening statements are not evidence, they're just  
25 an aid to understanding the significance of the evidence

1 when it comes in. They're really an overview or a road  
2 map. The evidence comes in piecemeal. The opening  
3 statement will kind of arch over all of that, and give you  
4 an overview of what the case is about from the Plaintiff's  
5 side and from the Defendant's side, so that when the  
6 evidence comes in, you'll be able to fit some of the pieces  
7 together.

8 And after the opening statements are made, the  
9 Plaintiff will introduce evidence. When the Plaintiff is  
10 through introducing her evidence, then, of course, the  
11 Defendants will put on their evidence and there may be some  
12 rebuttal, and then the Court will instruct you on the law  
13 and you'll hear argument of counsel and the case will be  
14 submitted to you for deliberation and for your decision.

15 All right. Is counsel ready to proceed? Mr. --

16 MR. BAIZ: Yes, Your Honor.

17 THE COURT: You're going to make the opening  
18 statement, Mr. Baiz?

19 MR. BAIZ: Yes, I am, Your Honor.

20 THE COURT: Very well.

21 MR. BAIZ: May it please the Court, members of  
22 the jury. My name is Tom Baiz. Seated at counsel table is  
23 Millie Johnson. She's the Plaintiff in this action.  
24 Seated next to her is Tom Lewis. You'll also hear from Don  
25 Johnson who is Millie's husband sitting in the first row

1 back there, and you'll see Debbie Enruth a lot during this  
2 trial. She is a legal assistant, and she'll be working  
3 with us during this trial.

4 If you look at a trial as a puzzle, the opening  
5 statement is an opportunity for me to show you what the  
6 puzzle will look like once the pieces of evidence and  
7 testimony have been put together. The testimony and  
8 evidence in this case will lead you down W. R. Grace's  
9 asbestos dust trail starting on the east coast and  
10 spreading to Libby, Montana, where W. R. Grace and its  
11 predecessor, Zonolite, have operated a vermiculite mine and  
12 mill for many years.

13 The vermiculite ore which is mined at Libby is and has  
14 always been contaminated with an asbestos fiber known as  
15 tremolite. Exposure to tremolite asbestos at that facility  
16 in Libby has meant death and disease to many workers and to  
17 their families. And it's that same exposure to W. R.  
18 Grace's tremolite asbestos which has caused Millie Johnson  
19 to develop asbestosis.

20 Asbestosis is a disease caused by exposure to  
21 asbestos. And it's a lung disease which is very slow to  
22 develop, sometimes taking 20 to 40 years after first  
23 exposure for an individual to start showing symptoms of the  
24 disease. But it's a disease that literally squeezes the  
25 air from an individual's lungs.

1           The testimony and evidence in this case will show that  
2   Millie Johnson is a totally innocent victim of W. R.  
3   Grace's tremolite asbestos and an innocent victim as well  
4   of W. R. Grace's utter disregard for her health and welfare  
5   and the health and welfare of its workers and their family  
6   members.

7           Millie Johnson is 53 years of age and a lifelong  
8   resident of Libby, Montana. During her early childhood,  
9   her father even worked at the vermiculite mine and mill  
10   there. He worked there for about five or six years. And  
11   Millie went to school at Libby, graduated from high school  
12   at Libby. Shortly thereafter she married Don Johnson in  
13   1955, and they've raised their four boys in Libby.

14           From the date of their marriage until 1981, or what is  
15   26 years, Don Johnson was exposed to great amounts of  
16   tremolite asbestos every workday throughout the 26 years.  
17   And you will hear from him about that. No one at W. R.  
18   Grace ever informed Don Johnson of the dangers of asbestos  
19   or hazards of asbestos, even though they knew them. So for  
20   26 years, Don Johnson had no idea what he was doing to his  
21   lungs.

22           In the early 1980s, Don was diagnosed as having  
23   asbestosis. And he's been followed by Dr. Allen  
24   Whitehouse, a pulmonologist in Spokane from whom you'll  
25   hear in this case. And Dr. Whitehouse advised Don in 1981

1 that he was totally disabled from his asbestosis. So Don,  
2 at the age of 48, became totally disabled and hasn't worked  
3 a day since then. His asbestosis is now severe and  
4 drastically restricting his lung capacity and many of the  
5 activities that he could perform as a result.

6 The importance of establishing Don Johnson's disease  
7 and the nature of and extent of his disease is because it  
8 is from Don Johnson, more particularly from his clothing  
9 that Millie Johnson contracted her asbestosis. Don Johnson  
10 would bring the asbestos dust home on his clothes on a  
11 regular basis for 26 years. He worked in a place called  
12 the wet mill, and in the wet mill the asbestos dust would  
13 stick to his clothes and then it would cake on his  
14 clothes. And so on a regular basis he'd take this clothing  
15 home, and it would be caked with asbestos dust. Millie  
16 Johnson would take the clothes, she'd pull open the pockets  
17 and there'd always be a considerable amount of dust in the  
18 pockets. She'd shake out the clothes vigorously to get as  
19 much of the dust off as he she could, and she'd put it in  
20 the washing machine always washing it separately from the  
21 family's clothing. She'd have to clean out the washing  
22 machine after washing them. She'd sometimes rewash, she'd  
23 sometimes wash three and four times to try and get the dust  
24 out of the clothes.

25 And that is the primary place where she got her

1 exposure. Also through the family vehicle, which Don would  
2 drive to a parking lot and then he would take a bus up to  
3 the facility and take a bus back. And, of course, he'd get  
4 in and out of that, and Millie would ride in the car. And  
5 she was the one to clean out the car, and some she got  
6 exposure that way too.

7 But even after Don was diagnosed as having asbestosis  
8 in the early '80s, Millie never dreamed that she was at any  
9 risk whatsoever. Nobody at W. R. Grace ever told her  
10 anything. She had no idea. So it was that Millie began to  
11 notice shortness of breath. And she decided to go with Don  
12 to Spokane to see Dr. Whitehouse when Don went for his  
13 regular exam in 1988.

14 At that time, Dr. Whitehouse performed the  
15 examination, and in taking a routine chest x-ray, he found  
16 extensive pleural disease. Now, you'll hear about the  
17 pleura and pleural plaques. But the pleura is the area  
18 that -- it's the covering of the lung and the covering of  
19 the chest wall. And it's the area in between those two.  
20 It's a very small area. And what happens is when the  
21 asbestos dust is inhaled, it either goes through the lymph  
22 system and gets into the pleura or goes through the lungs  
23 and travels through lung tissue itself and gets into the  
24 pleura. And then it lodges in the pleura and forms what is  
25 called pleural plaques. And you'll hear that term used.

1 Sometimes they -- pleura plaques are called the calling  
2 cards of asbestos.

3 But in any event, he found that and he also did a lung  
4 function test or what's called pulmonary functioning test,  
5 P-F-Ts. This is where Millie would blow into a tube and  
6 various figures would registered, registering as to her  
7 vital capacity in her lungs, her total lung capacity, and  
8 that sort of thing. It was in 1988 that Dr. Whitehouse  
9 found that Millie's forced vital capacity was only 83  
10 percent of what was -- of the predicted normal for a woman  
11 Millie's age, and her total lung capacity was only 87  
12 percent. And this must be considered in the context of a  
13 woman who's kept herself in good shape all her life and has  
14 been a lifetime non-smoker. So those figures should have  
15 been much higher, like around a hundred percent anyway.

16 So Millie went back for a followup in 1989. At that  
17 time, Dr. Whitehouse determined that she had lost 200 cubic  
18 centimeters off of her forced vital capacity and off of her  
19 total lung capacity, and you'll hear Dr. Whitehouse explain  
20 forced vital capacity, total lung capacity, and the  
21 significance of those figures. In March of this year, she  
22 went back for her annual followup examination, and her  
23 forced vital capacity had dropped to 80 percent of the  
24 predicted normal, her total lung capacity to 83 percent of  
25 predicted normal for a woman her age. And her diffusion

1 capacity to 75 percent.

2 Now diffusion is the ability of the lung tissue to  
3 transfer the gases, to transfer -- to make a carbon  
4 monoxide and oxygen transfer across the lung tissue. And  
5 that was reduced to 75 percent. And you'll hear Dr.  
6 Whitehouse testify about how that restriction is directly  
7 attributable to asbestos and her asbestos exposure.

8 As time has gone on, Millie has become more short of  
9 breath with no way of predicting the future. At the  
10 present time, she is still working at U-P-S 15 to 20 hours  
11 per week. But she's finding it increasingly difficult to  
12 perform the job tasks, and she fears that her asbestosis  
13 may cut her career short there. And we'll present some  
14 testimony as to the compensatory damages attached to that  
15 during this trial.

16 Millie's also concerned about her cancer risk. The  
17 fact that she's been exposed to asbestos places her at  
18 greater risk for developing a deadly cancer known a  
19 malignant mesothelioma. It's a cancer that attacks the  
20 lining of lungs and lining of the chest wall, the pleura,  
21 right where Millie has the plaques right now. And asbestos  
22 is one of the few substances known to cause malignant  
23 mesothelioma. And the fact that she has the plaques in  
24 addition to asbestos exposure, makes it even more likely  
25 that they could cause malignant mesothelioma. And she has

1 a fear of that.

2 She also has a fear of suffocation. With weather  
3 changes, and if there's pollution in the air like there is  
4 in Missoula sometimes, she'll have a difficult time and  
5 she'll, you know, be gasping for breath and feel a real  
6 tightness in her chest.

7 You'll hear from Millie and Don Johnson about how  
8 asbestosis has affected them, and you'll hear from their  
9 treating physician, Dr. Allen Whitehouse. Dr. Whitehouse  
10 is in Spokane, and he's a pulmonologist in Spokane. A  
11 pulmonologist is a specialist in pulmonary diseases, lung  
12 diseases, including asbestosis and asbestos-related  
13 diseases. He'll talk about his experience with asbestos-  
14 caused lung disease. His experience in general and more  
15 importantly his experience with people from Libby in  
16 particular, and the people from Libby are those who are  
17 exposed through the W. R. Grace facility there, the mine  
18 and mill.

19 He'll discuss the types of lung diseases that are  
20 caused by exposure to asbestos. Asbestosis, of course, is  
21 the non-malignant type, and he'll talk about that, and  
22 he'll talk about how the lungs are affected and how the  
23 individual is affected symptomatically. He'll tell you  
24 that asbestosis is not curable, and it's not treatable  
25 except maybe symptomatically. If somebody were to get a

1 cough or something like that, they could maybe treat the  
2 cough, but there's no cure and there's no real treatment  
3 for it.

4 And as I indicated before, he'll also talk about the  
5 mesothelioma risk. He'll tell you, too, that because he  
6 had so many patients from Libby who worked at the mine and  
7 mill, that he wanted to go there. And one day he got an  
8 invitation from W. R. Grace to tour the facility and he was  
9 very interested, and he accepted it. But for some reason,  
10 it was withdrawn, the invitation was withdrawn at the last  
11 minute, so he's never been able to visit the facility  
12 there.

13 Finally, Dr. Whitehouse will tell you about Millie's  
14 asbestosis and what he thinks about her future, and he'll  
15 also discuss Don Johnson's asbestosis, because he's  
16 followed him for nine years. And as I indicated before,  
17 that's where Millie got her disease.

18 You will hear, too; in fact, you'll see a video  
19 presentation from the Defendant's medical consultant in  
20 this case, a man by the name of Nicholas Sargent. Now, Dr.  
21 Sargent has no real relationship to this case whatsoever,  
22 except that he was hired by W. R. Grace's lawyer at the  
23 rate of \$500 per hour to offer testimony at this trial. We  
24 took his deposition at his office in Los Angeles less than  
25 a month ago. He'll testify that he's a radiologist, not a

1 pulmonologist. In other words, a radiologist is someone  
2 who just interprets chest x-rays, and his opinion is based  
3 almost exclusively on interpretation of chest x-rays.  
4 He'll talk about the criteria for diagnosing asbestosis,  
5 which includes a history from the patient; it includes  
6 chest x-rays, it includes pulmonary function testing, a  
7 finding of shortness of breath, and physiological  
8 abnormalities. And he will admit that he's only trained to  
9 do one of those things, and that is interpret the chest  
10 x-ray. And he will tell you that you must look to the  
11 treating doctors, in this case, Dr. Whitehouse for any  
12 indication as to functional impairment or disability,  
13 because he can't offer that as a radiologist.

14 He'll tell you that he's been a consultant in the past  
15 for various asbestos manufactures including Johns-Manville;  
16 that in four out of five cases in which he's consulted, he  
17 testifies on behalf of asbestos companies; and he's been  
18 asked by W. R. Grace to consult in 10 or 15 other asbestos  
19 injury lawsuits arising out of the W. R. Grace facility at  
20 Libby.

21 He was not asked to consult by Dr. Whitehouse in this  
22 case. He's never been involved in any treatment of Millie  
23 Johnson. He's never examined Millie Johnson. He's never  
24 even seen Millie Johnson. He knows nothing about the W. R.  
25 Grace facility. But despite Dr. Sargent's demonstrated

1 bias in favor of asbestos manufacturers, here is what he  
2 states which is of relevance in this case: That asbestos  
3 is a dangerous substance; that the health risk of asbestos  
4 exposure has been known in England since the early 1900s  
5 and in the world community for many, many years; that  
6 tremolite asbestos such as found in Libby is amphibole form  
7 of asbestos which is the type most commonly found in lung  
8 tissue of workers. He's seen asbestos caused lung disease  
9 in people who simply live in the same house with an  
10 asbestos worker. He admits that Millie Johnson has pleural  
11 disease from asbestos exposure. And he characterizes  
12 Millie Johnson's pleural disease as moderately severe. He  
13 admits that asbestos exposure increases the risk of getting  
14 the deadly cancer known as malignant mesothelioma; and  
15 future progress of Millie's disease is unknown. He states  
16 that only Millie Johnson's treating doctor, in other words,  
17 Dr. Whitehouse, can make any determination as to her  
18 disability or her impairment.

19 Then we get into the other aspect of this case, which  
20 is W. R. Grace's knowledge of the hazards of asbestos in  
21 general and their knowledge of the hazards at their Libby  
22 mine and mill in particular. You'll hear excerpts from  
23 depositions of, hopefully, J. Peter Grace himself, the  
24 chairman of the board, who set up his worldwide corporation  
25 so as to know as little as possible about his operations,

1 such as the Libby mine and mill.

2 You'll hear the deposition testimony of a man named  
3 Rodney Vining who was in charge of the entire construction  
4 products division of W. R. Grace, and that was the  
5 subdivision which was in charge of the mine and mill  
6 operation in Libby. And you'll hear from him. And it's  
7 amazing that despite having visited the Libby operation 25  
8 to 50 times, receiving documents about it over the years,  
9 and authorizing documents, he remembers very little.

10 You'll also hear from Earl Lovick who is seated here  
11 today. He started working for W. R. Grace's predecessor,  
12 Zonolite Company in Libby as an accountant in 1948, became  
13 assistant manager in '62, and worked in that capacity until  
14 1968, at which time he became general manager of the Libby  
15 mine and mill. He was W. R. Grace's corporate connection  
16 at Libby. He saw much of the flow of documents which  
17 you'll see that went between W. R. Grace officials and  
18 which related to the Libby mine and mill.

19 Finally, you'll be able to see the trail of documents  
20 establishing W. R. Grace's knowledge of the hazards of  
21 asbestos. This starts with the knowledge of the hazards of  
22 asbestos at their corporate headquarters on the east coast  
23 many years before W. R. Grace took over the Zonolite  
24 operation at Libby, Montana. You'll be able to see Montana  
25 State Board of Health documents from inspections which they

1 did at the Libby facility starting in the mid 1950s.  
2 You'll be able to look at an x-ray study which was  
3 performed on workers back in 1959 and which showed 48 out  
4 of a hundred and thirty employees that were checked had  
5 abnormal chest x-rays. In 1963 and 1964 the Montana State  
6 Board of Health performed followup inspections at Libby.  
7 The dust counts taken in those followups, this is after  
8 W. R. Grace took over in '63, all exceed the 5 million  
9 paricles per cubic foot allowable concentration. And what  
10 you have to understand is that's a concentration that has  
11 been drastically reduced over the years. Now the allowable  
12 concentration is like point two fibers per cubic  
13 centimeter. Back then the allowable concentration was 5  
14 million particless per cubic foot of air. Yet all of the  
15 figures registered were well over that. In fact in the  
16 1963 counts the dust counts ranged from 10.7 million  
17 particles per cubic foot to 10.2 million particles per  
18 cubic foot. Also these reports pointed out a serious dust  
19 concentration at Libby.

20 And in those reports -- you'll be able to look at  
21 them-- it will show the connection between asbestos  
22 exposure and cancers such as malignant mesothelioma which  
23 I've already mentioned.

24 None of this information was made available to Don or  
25 Millie Johnson, even though they had it and had had it for

1 years. You'll be able to look at an x-ray and spirometry  
2 study. Now, spirometry is basically the pulmonary function  
3 test which I referred to earlier and which you will hear  
4 about. A spirometry study was done in 1964 showing serious  
5 hazard for its employees, and Don Johnson was even a part  
6 of that in one or more of the documents. You'll even see  
7 his name listed as to the x-ray results.

8 Also in 1964, W. R. Grace knew that a worker of seven  
9 years, only seven years was diagnosed as having asbestos  
10 caused lung disease. In January of 1965, the man who was  
11 in charge of the Libby operation at the time, a Mr. Blake,  
12 was reviewing a decade of reports on the Libby mine and  
13 mill, and he stated this: I quote, "I can only say that it  
14 represents a very sorry record."

15 Also, in 1965, there were abnormal chest x-rays in 18  
16 out of 39 employees at Libby who had ten or more years of  
17 employment there. By 1968 or 1966, excuse me, W. R. Grace  
18 had knowledge of the link between asbestos exposure and  
19 cancer. And in fact, they had knowledge that the exposure  
20 didn't need to be continuous for the link to be shown. A  
21 1967 American Journal of Medicine article reported that  
22 simply living in the same house as an asbestos worker could  
23 produce serious lung disease.

24 This certainly would have been important for Millie  
25 Johnson to know, but she was never told. Also in 1967,

1     there was a hearing before the Montana State Industrial  
2     Accident Board. And this hearing was concerning a W. R.  
3     Grace worker at Libby who had asbestosis from his work at  
4     the mine and mill there. A W. R. Grace lawyer from the  
5     east coast who was reporting to other Grace officials on  
6     this hearing stated, and I quote: "A record has now been  
7     made that there is a danger of asbestosis in our  
8     operation."

9             In 1968, W. R. Grace knew that relatives of asbestos  
10     workers were at risk for lung disease, and this included  
11     women who had washed their husband's work clothes  
12     regularly.

13            Despite knowing this, there was still no warning, no  
14     mention to Millie Johnson. In 1969, W. R. Grace officials  
15     were still pondering just how much they should tell their  
16     employees that their own lung conditions.

17            In 1969, also, a document entitled "The Vermiculite  
18     Ore Review" appears to have crossed the desk of J. Peter  
19     Grace himself, the chairman of the board of W. R. Grace;  
20     and it indicated that tremolite asbestos at Libby was a  
21     definite health hazard.

22            Microscopic tests which were done revealed that the  
23     Libby tremolite asbestos had a five to ten times greater  
24     chance of causing a cancer than a more common type of  
25     asbestos fiber known as crysotile.

1           In the latter 1960s, the Public Health Service was  
2   interested in studying populations that were exposed to  
3   asbestos disease. W. R. Grace refused to cooperate. In  
4   June of 1968, the Public Health Service sought the names of  
5   former employees at the Libby mine and mill so they could  
6   do some research on asbestos disease. W. R. Grace  
7   superiors refused to give permission to release the names  
8   and they stated, "We should not give any listings of  
9   employees unless there is a legal requirement to do so."

10           When permission was sought again to release the names,  
11   the Grace superiors stated that they'd run it through  
12   Cambridge, which is their headquarters again, and the  
13   answer is still the same, "We do not choose to divulge the  
14   information."

15           Members of the jury, at the close of this case, we're  
16   confident that Judge Pregerson will present to you  
17   questions as to the compensatory damages that may be  
18   awardable to Millie Johnson to compensate her for her  
19   losses, past, present, and future. And also a question as  
20   to punitive damages which are used to punish W. R. Grace  
21   for their conduct.

22           The testimony and evidence that we present in this  
23   case will be presented in support of our two theories as  
24   the judge has already indicated to you. The first is  
25   strict liability. And with our strict liability theory, we

1 are -- our position is that W. R. Grace is liable for  
2 allowing an abnormally dangerous substance, namely  
3 asbestos, to escape its mine and mill operation and to  
4 damage Millie Johnson's lungs.

5 Our other theory of liability is negligence. And here  
6 we'll show that W. R. Grace knew of the health hazards of  
7 asbestos and the health hazards of its own operation at  
8 Libby, but despite knowing that, that they failed to warn  
9 Millie Johnson of the dangers. They had a duty to warn,  
10 but they failed to warn. They had a duty to take  
11 precautions to protect Millie Johnson and others in her  
12 position, but they failed to take those precautions. They  
13 didn't -- They didn't provide washers and dryers up on the  
14 hill. Showers were only there for a very short period of  
15 time and got so clogged with asbestos that they used it as  
16 a storage room, and they didn't have adequate facilities to  
17 protect. They just simply didn't take adequate measures to  
18 keep their asbestos dust on their own premises, even though  
19 they knew how dangerous it was.

20 Then at the conclusion of the case, it will be in your  
21 hands. And as my dad always used to tell me, you need to  
22 keep your eye on the ball. We don't have any ball here,  
23 but the ball is the truth, ladies and gentlemen. And don't  
24 be diverted from the truth in this case, the truth about  
25 W. R. Grace's conduct and the truth about asbestosis and

1     what it has done and will do to Don and Millie Johnson.  
2     Because the truth was the same yesterday as it is today and  
3     as it will be tomorrow. I'm confident that you'll find the  
4     truth in this case and that you will do justice through  
5     your verdict.

6             Thank you.

7             THE COURT: Thank you, Mr. Baiz. Mr. Graham, do  
8     you wish to make an opening statement?

9             MR. GRAHAM: Yes, sir, Your Honor. We would at  
10    this time.

11            THE COURT: Vey well.

12            MR. GRAHAM: May it please the Court, lady and  
13    gentlemen of the jury. It's always difficult going second,  
14    because you have to many things that you want to say in  
15    reaction to the things that were said initially. But I  
16    suppose it's better going second than going first and not  
17    being able to respond to the comments that are being made.

18            Obviously, in this case, the evidence will be  
19    presented after these arguments -- after these opening  
20    statements, and then there will be a lot of argument about  
21    what the evidence means. So you'll get a lot more of  
22    lawyer talk after the evidence comes in.

23            What I would like to do, and it may take -- it may  
24    take a few minutes, and I would appreciate your patience  
25    during the few minutes that it takes me, what I would like

1 to do would be to provide you with a little bit of a  
2 historical background with respect to the Libby operation  
3 so that you can understand the evidence as it comes in  
4 throughout the case, and so that you can get a better  
5 picture of precisely what aspects of knowledge were known  
6 to various groups of people at various times. That's  
7 undoubtedly going to be very significant as you listen to  
8 the evidence.

9 The events in this case span about 40 years. Go back  
10 to the '50s. And each of you could look back in your life,  
11 and 40 years is a lot of time and a lot of documents and a  
12 lot of things that have happened. But in any event, as I  
13 go through this 40 years, I'll try to capsulize it, and  
14 like I say, I hope that it will help you as you're  
15 listening to the evidence understand how everything came  
16 together.

17 First of all, I'd like to remark as to the  
18 relationship between the parties. Because as you know, we  
19 have Mrs. Johnson as the Plaintiff in this case and W. R.  
20 Grace, who's represented here today by Mr. Lovick, as the  
21 Defendant in this case. Mr. Lovick is here because of the  
22 fact that of all of the people who were involved with W. R.  
23 Grace and its predecessor Zonolite in Libby, Earl is  
24 probably the one that knows more about what happened up  
25 there.

1           In any event, there is no direct relationship between  
2 these parties. Mrs. Johnson, as you know, did not work at  
3 the mine and mill in Libby. She visited on a few occasions  
4 with guests but didn't work there. Her husband worked  
5 there as has been described. The claim as has been told to  
6 you is that he brought his clothing home and it had some  
7 asbestos dust on the clothing. The claim is that that led  
8 to the asbestos related disease that has been diagnosed in  
9 Mrs. Johnson.

10           The evidence will be primarily from the testimony of  
11 Mr. Lovick that W. R. Grace nor Zonolite before it had any  
12 idea that any of the asbestos that they knew to be a  
13 natural contaminant at the Libby mine and mill would find  
14 its way into homes and affect the people, the housewives  
15 and other people living in the homes.

16           It will be the evidence on the part of the Defendant,  
17 W. R. Grace, that there was no knowledge by Grace that  
18 Mrs. Johnson would be harmed. There was no medical basis  
19 at that time for making that prediction, and it was not  
20 reasonably foreseeable based on Grace's knowledge.

21           Now, what was the purpose of the mine and mill at  
22 Libby? The purpose of the mine and mill was to mine and  
23 process -- put into concentrate form a substance known as  
24 vermiculite. It was discovered there in the 1900s. The  
25 mill and mine are about 12 miles out of Libby, and I always

1 get confused out of Libby because what I think is east and  
2 west is usually north and south. But it's 12 miles out  
3 towards the Libby dam.

4 Vermiculite is a very versatile product. It expands  
5 and has been used as insulation. A lot of people have  
6 known it to be a substance called Zonolite. And it -- It's  
7 strange because when it's mined, it's mined in little flat  
8 flake sorts of things, or substance. And then to change it  
9 into the substance that is marketed ultimately, it's put  
10 into a high heat process and the moisture in the  
11 vermiculite causes it to expand and it forms a very light-  
12 weight insulating type of substance. Sometimes it's  
13 referred to as worms, because it looks sort of like a worm  
14 that has gone from a flat little piece of vermiculite.

15 We'll show you photographs of that, the two different  
16 substances, the vermiculite before it's expanded and  
17 vermiculite after it's expanded, so you can see what it  
18 looks like.

19 As I say, it's used in a number of ways. Insulation  
20 is one. Gardens, texturing, various and sundry things.

21 Now, this mine and mill were established by Zonolite.  
22 And it's an open mining, open operation. The ore was taken  
23 from this sort of open hilltop and transferred to a  
24 transfer point with trucks and then went through a milling  
25 process. And basically, the milling process consisted of

1 taking the waste rock from this vermiculite so that when  
2 the -- when the process came out of the mill or when the  
3 product came out of the mill, it was essentially  
4 vermiculite. This is the process that ended up creating  
5 the dust problem that they had at Libby right in the  
6 inception, particularly in the dry mill, because what they  
7 would do is they would use shakers and screeners, something  
8 like, I suppose, you could imagine an old-fashioned  
9 threshing machine or a combine shaking things and causing  
10 the flake material to precipitate out and then go off and  
11 be processed.

12 As I say, in this rock was a natural product called  
13 tremolite, and it is as Mr. Baiz indicated, a form of  
14 asbestos. That was part of what they were trying to take  
15 out of this product before they marketed it. And that was  
16 part of this whole manufacturing process. The Libby mill  
17 was unique in that regard, because that's, as I understand  
18 it, the one location where there was this tremolite in the  
19 vermiculite deposits that they were working with.

20 Anyway, it didn't involve situations where asbestos  
21 was produced or utilized for purposes of commercial  
22 marketing. In fact, they didn't want to have the asbestos  
23 in the product. After the stuff was concentrated, after  
24 the vermiculite was concentrated, then typically it would  
25 be sent off to be expanded in other areas.

1           Now, as I indicated, it was the -- the operation was  
2   originally owned by Zonolite Company, and it was a smaller  
3   company with headquarters in Chicago, as I recall. They  
4   owned the mine, the mill, and some expanding plants, other  
5   expanding plants operated under license.

6           W. R. Grace first became involved in this thing in  
7   1963, and this would have been some 10 to 15 years -- 10 to  
8   12 years after Don Johnson started working up at the Libby  
9   mine and mill. W. R. Grace has operated it since that  
10   time.

11           There was a problem with dust at the Libby mine and  
12   mill and the facility from the beginning. As I indicated,  
13   it was the dry mill where these rocks and debris were taken  
14   from the vermiculite that was the dustiest of the  
15   locations. As Mr. Baiz indicated, the Board of Health made  
16   a number of visits. And they originally came up, I think  
17   in about 1940 sometime, but the first report that is  
18   probably significant and will be shown to you is the report  
19   in 1956.

20           What they did is they tested for the particulates in  
21   the air something like they do here in Missoula during the  
22   wintertime, I guess. Over the years, the concept and ideas  
23   of the amount of dust exposure changed as you've seen it  
24   change in other situations. Originally it was spoken of as  
25   the maximum allowable concentration. And it presumably at

1 that point was the line between what was safe and what  
2 could be considered to be unsafe. It wasn't a precise  
3 dividing line as the reports that you will read show.

4 In the '40s and '50s, there was a safe level of 50  
5 million parts per cubic foot of dust. In 1956, another  
6 standard came into play, and that was 5 parts per million  
7 -- or five million parts per cubic foot, but that was a  
8 hundred percent asbestos dust. And the problem was that no  
9 one knew how much tremolite dust was contained in all of  
10 this dust that they were getting. There weren't accurate  
11 ways to measure that at that time.

12 The Board of Health estimated it at 8 percent, and at  
13 some times some of the locations exceeded that, and W. R.  
14 Grace or at that time it was Zonolite, but that's something  
15 that's shown in the reports, and it's admitted to be the  
16 case.

17 Over the years, the Board of Health continued their  
18 inspections, and when W. R. Grace -- and that information  
19 will be provided to you. When W. R. Grace took over, they  
20 attempted to accelerate the cleanup process, and over the  
21 years before W. R. Grace had taken over, there were some  
22 attempts made to try to clean up the dust. They had fans  
23 and tried to cover up the areas that were creating the dust  
24 and all of that. But at the time that W. R. Grace took  
25 over, there wasn't any indication that it was an emergency

1 situation. And so they -- That was not indicated by what  
2 they heard of the conditions. So they proceeded to try to  
3 continue to clean it up at a reasonable rate.

4 As time went on, as I indicated, the standards that  
5 the Board of Health were applying became more stringent as  
6 you frequently see with Board of Health types of things as  
7 more is discovered. They went to a 20 million part per  
8 cubic foot figure, then down a 10 million part per cubic  
9 foot figure, then to a totally different measurement called  
10 fiber count.

11 At any rate, the old mill could only be cleaned up so  
12 much. And ultimately when the technology became available  
13 and as soon as the technology became available, W. R. Grace  
14 eliminated the old dry mill and a wet mill which was  
15 operating at that time, as Mr. Baiz indicated, that's where  
16 Don Johnson worked, they eliminated those two and put a  
17 totally new mill in which satisfied all of the federal and  
18 state requirements with respect to dust exposure.

19 The engineering of that mill started in 1969. And it  
20 was a difficult process to get it engineered, because it  
21 was something entirely new, and the testimony will be that  
22 it was very difficult to get it up and running and  
23 processing the ore.

24 From that point on, the dust levels at the vermiculite  
25 mine and mill were believed to be safe. It involved this

1 whole process of improvement, first from the 1963 period  
2 until 1974, and then the construction of the new mill  
3 involved considerable expenditures of funds establishing a  
4 commitment by W. R. Grace to the safety of its workers.

5 Now, Mr. Baiz has described briefly for you the  
6 concept of asbestos exposure and what health effects there  
7 are related to asbestos. As we now know, asbestos is a  
8 dangerous substance. Different forms of asbestos seem to  
9 be more dangerous than other forms. Usually, however, when  
10 we hear of asbestos being dangerous, we hear of it in terms  
11 of insulations or fire protection, or we remember it being  
12 used on furnaces or boilers. We thought it was then a  
13 miracle fiber because it was perhaps the best insulator or  
14 fire protective device that existed.

15 But at Libby, the tremolite, which is a form of  
16 asbestos, is a natural product. It comes right out of the  
17 ground. You can pick up pieces of it. We'll have  
18 photographs to show you of the asbestos as it just comes  
19 out of the ground. But as we know now, it can cause  
20 problems in susceptible people. For instance, Mr. Baiz  
21 spoke of lung cancer where there are high exposures to  
22 asbestos. That's not one of the matters that need concern  
23 you in this case.

24 A person who's sufficiently also exposed can also get  
25 asbestosis. Mr. Johnson is an example of a person with

1 asbestosis. In that disease, the asbestos affects the  
2 lungs by scarring the lungs. Sometimes called interstitial  
3 fibrosis. You'll probably get a lot of these terms thrown  
4 at you throughout the period of this trial, but they'll be  
5 explained by the doctors or by whoever's testifying.

6 Then there's another disease process which is related  
7 to asbestos which is involved in this particular case, and  
8 that's pleural disease. Pleural plaques. And the best way  
9 to describe that is by just illustrating where it is that  
10 the pleura is and where the plaques form. And if you take  
11 my two fists and say that my left arm is the lung and my  
12 right arm is the chest wall, the space in between is called  
13 the pleural space. My left hand, or the lung, would be  
14 covered by a layer, a very thin layer of tissue called the  
15 visceral pleura. The chest wall part of my hand would be  
16 covered by a very thin layer called the parietal pleura.  
17 And with pleural disease, there are plaques that form on  
18 the inside of the parietal pleura. Those are typically  
19 asymptomatic, and as Mr. Baiz said, are referred to  
20 frequently as just a calling card of asbestos exposure.

21 So if you have had -- If you have pleural plaques,  
22 essentially what it means is that you've been exposed to  
23 asbestos. They typically only show up on x-rays or C-T  
24 scans, and as I say, it only shows that the person was  
25 exposed. And that's what we have involved in this

1 particular case.

2       There is one similarity between all of these, and that  
3 is the latency period from the time of exposure until the  
4 time of the -- the disease becomes apparent. And Mr. Baiz  
5 spoke of that as well. We're talking in terms of 15 to 30  
6 years between the time of the exposure and the development  
7 of the disease to the point that you can see it. So when  
8 you look at what's happening today as far as health picture  
9 is concerned, you have to look back 15 to 30 years before  
10 to find out what the situation was like as far as the  
11 exposure and as far as the knowledge concerning asbestos at  
12 that time.

13       Now, as I indicated, W. R. Grace or Zonolite before  
14 W. R. Grace, was aware of the dusty conditions and they  
15 provided respirators, breathing devices in the dustier  
16 parts of the mine and mill, made them mandatory in the dry  
17 mill which was the dust creator up there. You'll be shown  
18 Board of Health reports by the Plaintiff in this action,  
19 and you'll note that most of them relate to inspections  
20 only of the dry mill, because that was the area that they  
21 were concerned with. They knew that the dust was not  
22 healthful to the workers, but they didn't know about  
23 tremolite. There was very little written about tremolite.

24       The testimony will be that the stuff that was written  
25 related to the other forms of asbestos that are more

1 common. Tremolite is fairly rare as far as occupational  
2 exposure.

3 Now, in 1959, W. R. Grace took x-rays of all their  
4 employees. And it was a system -- They used a system that  
5 was designed in cooperation with the doctors in Libby. And  
6 the idea was that all of the employees would be -- would be  
7 x-rayed to determine whether they had lung problems. Now,  
8 the doctors agreed that this procedure would be the best.  
9 They provided the results to the family physician of each  
10 one of the employees, so that the person who ended up with  
11 the x-ray report was the doctor that was normally in charge  
12 of treating that particular individual. The idea was that  
13 the doctors would then tell the employees about the results  
14 of the x-ray.

15 Mr. Lovick will testify that the reason that that was  
16 done was so that qualified medical people would be able to  
17 talk to the individuals who were the workers up there about  
18 any conditions that they may have, rather than have the  
19 information provided by non-medical personnel.

20 Now, the workers were told when their x-ray reports  
21 were available and so they were supposed to go in and see  
22 their doctor when the x-ray reports were available. The  
23 x-rays, as Mr. Baiz indicated, did in fact show a number of  
24 abnormal chests, but they were abnormal for all different  
25 kinds of reasons. And when we go into that particular

1 area, we'll discuss it in more detail in the testimony.

2 In 1964, there was a program set up so that there were  
3 x-rays every year. And the individuals were told to talk  
4 to their doctor about the x-ray reports every year so the  
5 health of the employees was monitored on a yearly basis.

6 You've heard that pulmonary function tests were taken  
7 in 1964, and then starting in the '70s, they were taken  
8 every year and the employees were told of all of the  
9 pulmonary function test results. In 1964 when they took  
10 those pulmonary function tests, which are breathing tests,  
11 they attempted to correlate them with the x-rays. They  
12 were sent off and nothing of a conclusive nature was found  
13 with regard to the examination of those pulmonary function  
14 tests.

15 Similarly, a study was -- Or the doctors consulted --  
16 Libby doctors consulted with regard to the x-rays up there  
17 in 1959 and didn't find any conclusions that could be drawn  
18 from the x-rays as to whether Libby presented a danger or  
19 didn't present a danger to the health of the workers. And  
20 that was done with the doctors.

21 So as time went on, in the mid '60s, there was some  
22 indication of the first asbestosis case. The first  
23 asbestosis hearing as has been discussed previously was in  
24 1967. And at that point, W. R. Grace recognized that some  
25 of the people who were the employees up there might be

1 getting diseased. At that very same point, W. R. Grace  
2 undertook with a sense of urgency, the improvement of the  
3 conditions at the mine and mill. And very shortly  
4 thereafter is when the technology finally became available  
5 to replace the whole thing. And as I indicated, at  
6 substantial cost, they replaced the whole mill.

7 So over the years the dust levels had been lowered by  
8 various improvements. There will be the testimony about  
9 each one of those steps. The standards had been lowered by  
10 the Health Department as always. And the plant was  
11 redesigned. And that was 17 years ago that that was done.  
12 A long time ago.

13 Over the years, studies had been suggested, and  
14 Mr. Baiz had pointed out, for example, we'll take the H-E-W  
15 request for information concerning employees' names and so  
16 forth. There was a request for providing the names so that  
17 H-E-W could conduct a study, and the decision was made for  
18 some reason or another not then to provide the names. But  
19 a year or two later, the names and information were all  
20 provided, and H-E-W did not undertake the test simply  
21 because of the fact, apparently, that they didn't have the  
22 funds to do the study at that time. So while there were  
23 studies proposed, we'll talk about the studies that were  
24 proposed and the difficulties in getting those  
25 accomplished.

1           Now, I've taken too much of your time, but I want to  
2   spend just a few moments with respect to relating it to  
3   this specific case. As we've indicated, Mrs. Johnson has  
4   pleural plaques. It's been diagnosed by x-ray. We've  
5   indicated that those are the calling cards of asbestos  
6   exposure, and so she got that asbestos exposure at some  
7   point in her life. Presumably between 20 and 30 years  
8   ago. But typically, pleural plaques are asymptomatic, they  
9   don't cause any symptoms.

10           She claims, Mrs. Johnson claims some shortness of  
11   breath, and that's been reported to her physician, and it's  
12   been reported by her to have existed over a number of  
13   years. Her testimony at the time we took her deposition  
14   was that it didn't interfere with her work, and she'll tell  
15   you about all of that.

16           I should mention that during the part of the lawsuit  
17   where we're preparing to get ready for the trial, we take  
18   depositions, which are documents that are sworn statements  
19   under oath, and so we have an idea what the other side's  
20   going to say and what the testimony is going to be. And we  
21   have to rely upon what's said in those depositions in  
22   preparing for our cases.

23           So at the time the deposition was taken, Mrs. Johnson  
24   indicated that it didn't interfere with her work. She'd  
25   had no medical expenses except for the two, I think, doctor

1 visits or maybe three doctor visits that she had had to  
2 Dr. Whitehouse. There will be testimony that there was no  
3 progression in her disease and that there was no disability  
4 related to her disease.

5 Now, undoubtedly, her husband, Don Johnson, will  
6 testify here at trial. And there will be testimony  
7 concerning the fact that he has a serious breathing  
8 problem, a lung problem. Mr. Johnson has had his own claim  
9 and that's all been entirely resolved. So the only claim  
10 that's being forwarded here by the Plaintiff is the  
11 Plaintiff's own claim, Mrs. Johnson's own claim that has  
12 nothing whatsoever to do with any claim by her husband.  
13 We're only concerned about her physical condition as it  
14 relates to this particular case.

15 There was slight mention of Dr. Sargent. And you'll  
16 see a videotape deposition of Dr. Sargent, and it is in  
17 fact true that his fee was fairly substantial. But when  
18 you look at his curriculum vita, his resume that's attached  
19 as an exhibit in this case, you will see that he is one of  
20 the world's foremost experts on radiology, x-rays, and  
21 asbestos-related diseases. He has written extensively in  
22 the field, and the reason that he can't be here at trial,  
23 you'll find out from his deposition, is that he's  
24 presenting a paper on asbestos-related problems at a  
25 conference in Sweden, so his testimony is going to be with

1 respect to the x-rays that he looked at and his testimony  
2 is going to be -- or is that Mrs. Johnson's problems as far  
3 as you can see from the radiology, from the x-ray, is all  
4 on the chest wall parietal pleura, pleural plaques side;  
5 and that she has no problems inside the lung. Nothing  
6 inside the lung creating a problem with her breathing.

7       There will be testimony as well indicating that there  
8 are other reasons for shortness of breath. There are a lot  
9 of other things that can happen when people get short of  
10 breath, and some of us even notice it as a natural process  
11 of aging, we breathe a little deeper as we go up the stairs  
12 when we are going home.

13       In conclusion, I've -- I don't know whether you've  
14 ever seen it, they've had these brief histories of time  
15 things where they've taken photographs and run through a  
16 long period of time with photographs in just a few minutes;  
17 and that's what I sort of feel like I've done here. We've  
18 gone through 40 years' progress with respect to the  
19 Zonolite plant and W. R. Grace plant in Libby. We'll round  
20 that out for sure during the testimony here today.

21       Much has happened, and much of what has happened, I  
22 haven't had the opportunity or the time to mention to you  
23 this morning. But it's our contention and our belief that  
24 when you view all of the evidence, you will find that there  
25 has been continual improvement from the early '50s in the

1 operating conditions at the mine and mill as far as  
2 attempting to control the dust problem. There will have  
3 been some fluctuations with regard to dust level, but the  
4 improvement has been continuing. There will be evidence of  
5 careful monitoring of the employees from at least 1964 on,  
6 and that's when W. R. Grace took over the mine and mill.  
7 And it's our belief that there will not be evidence of any  
8 callous disregard of either the employees or any third  
9 parties like Mrs. Johnson in this particular case. The  
10 evidence simply will be and Mr. Lovick will tell you that  
11 they had no idea that there would be exposure problems that  
12 could be created to people who weren't employees at the  
13 mine and mill and who didn't come up to the mine and mill  
14 for any purposes.

15 During the process of this trial, we will trust that  
16 you will do several things. We will trust that you will  
17 judge the case on facts and not on sympathy. We trust that  
18 you will await until the entire case is submitted to you  
19 before you make up your mind what's right and what's wrong  
20 in this case. We trust that you will treat W. R. Grace the  
21 same as you would treat an individual that walked into the  
22 courtroom. We trust that you will apply the law that the  
23 Judge gives you. We trust that you will remember the  
24 context of this action. And by "context" I mean, the time  
25 periods in which the events occurred that are significant

1 in the case and the knowledge that was available at that  
2 time. And then finally, we trust that you will treat only  
3 the case that is presented to you here today and over the  
4 next few days and won't think about other people's cases,  
5 particularly Mr. Johnson's which has already been  
6 resolved.

7 I certainly appreciate your attention, ladies and  
8 gentlemen of the jury, and thank you for serving here  
9 today.

10 THE COURT: Thank you, Mr. Graham. I think this  
11 would be an appropriate time for us to take a noon recess.  
12 I'll excuse you until one o'clock, and you'll start hearing  
13 testimony at that time. But please remember that you are  
14 not to discuss this case among yourselves or with anyone  
15 else until it's finally submitted to you. And that will  
16 happen, as I pointed out earlier, after you've heard all  
17 the evidence, the Court's instructions on the law, and the  
18 argument of counsel, and that will take place probably  
19 sometime early next week.

20 So with that, I'll excuse you and we'll resume at one  
21 o'clock.

22 (The proceedings in this matter were recessed at  
23 11:52 a.m. and reconvened at 1:13 p.m.)

24 (The following proceedings were had in open  
25 court, with the jury present, beginning at 1:13 p.m.:)

1           THE COURT: All the jurors are present and all  
2 counsel are present. Before I ask the attorneys for the  
3 Plaintiff to call their first witness, I just want to tell  
4 you two things, members of the jury: Remember that Mildred  
5 Johnson is the only Plaintiff in this case. In considering  
6 the issues in her case, you are not to consider or be  
7 influenced by the disposition of her husband's case. Do  
8 you understand that? Do you understand what I'm saying?  
9 Okay.

10           And then the other statement I wish to make is this:  
11 That the W. R. Grace and Company is the successor to  
12 Zonolite Company. And unless you're otherwise instructed,  
13 the conduct and activities of Zonolite are to be considered  
14 as the conduct and activities of the W. R. Grace and  
15 Company. Do you understand that? Is that clear to you?

16           THE COURT: All right. Fine. Thank you. You  
17 may call your first witness.

18           MR. LEWIS: Thank you, Your Honor. The Plaintiff  
19 would call Mr. Earl Lovick to the witness stand.

20

21 EARL D. LOVICK, having been called as a witness on behalf  
22 of the Plaintiff, being first duly sworn according to law,  
23 was examined and testified as follows:

24

25           CLERK OF COURT: Would you please state your name

1 and spell your last name.

2 THE WITNESS: My name is Earl D. Lovick.

3 L-O-V-I-C-K.

4 CLERK OF COURT: Thank you. You may be seated.

5 DIRECT EXAMINATION

6 BY MR. LEWIS:

7 Q Mr. Lovick, where do you currently reside?

8 A 1021 Idaho Avenue, Libby, Montana.

9 Q Who is your employer?

10 A I'm unemployed. I am retired.

11 Q Well now, Mr. Lovick, that's not quite true, is it?

12 Isn't it a fact that you're employed to attend this trial  
13 for W. R. Grace?

14 A Yes, sir.

15 Q And they're paying you to appear in this trial; is  
16 that true?

17 A Yes, sir.

18 Q And you do consulting work for W. R. Grace from time  
19 to time, and you've done so ever since you've retired; is  
20 that true?

21 A Yes, sir.

22 Q When did you technically retire or retire as a full-  
23 time employee from W. R. Grace?

24 A June 30th, 1983.

25 Q When you retired from W. R. Grace on June 30, 1983,

1 how long had you been in the service of W. R. Grace or its  
2 predecessor in interest, Zonolite Corporation?

3 A Just over 35 years.

4 Q Since your retirement, have you been asked by W. R.  
5 Grace to -- or paid by W. R. Grace to compile certain  
6 information concerning asbestos-related lung disease  
7 arising out of the Libby operations?

8 A Yes, sir.

9 Q And have you been paid to give depositions by W. R.  
10 Grace in a number of cases similar to this?

11 A Yes, sir.

12 Q And is it true that this is the first case of this  
13 kind to ever be submitted to a jury or to be tried to a  
14 jury?

15 A I don't know.

16 Q Well, Mr. Graham said in his opening statement that  
17 you were the corporate representative. And the reason you  
18 were the corporate representative was because you knew more  
19 than anyone else about what went on at the mine and the  
20 mill. Do you recall that statement he made?

21 A Yes, sir.

22 Q Do you know of any other case that's ever been  
23 submitted to a jury in Montana?

24 A No, sir.

25 Q What's your educational background, sir?

1 A I have a Bachelor of Art's Degree in business  
2 administration from the University of Montana.

3 Q When did you obtain that degree?

4 A In 1947.

5 Q After you graduated from the University of Montana,  
6 what was your first job?

7 A After I graduated from the University of Montana, I  
8 took two quarters of graduate work, and then I was hired by  
9 Zonolite Company.

10 Q What was the nature of your graduate work?

11 A It was in the -- It was in business administration  
12 with a major in accounting.

13 Q You were hired by Zonolite in the accounting  
14 department; is that correct?

15 A Yes, sir.

16 Q What was your initial job title?

17 A Accountant.

18 Q How long did you hold that particular position?

19 A Well, I held the position of accountant until 19- --  
20 1961, I believe it was.

21 Q So from 1948 to 1961, you worked as an accountant; is  
22 that true?

23 A Yes, sir.

24 Q And then what position did you take?

25 A Well, my title at that time in 1961 was assistant to

1 the manager, and the up until that time, I had the  
2 responsibility for the accounting plus -- plus some other  
3 responsibilities. And in 1961 an accountant was hired to  
4 do the major part of the accounting work.

5 Q From 1948 to 1961, as an accountant, where was your  
6 office located?

7 A In the town of Libby, City of Libby.

8 Q Is the headquarters for Zonolite or W. R. Grace's  
9 operations located in the town of Libby as opposed to on  
10 the mountain?

11 A For the Libby operations, it was in the City of Libby,  
12 yes.

13 Q So for the entire period of your employment by  
14 Zonolite or W. R. Grace, the headquarters was in the town  
15 of Libby; is that correct?

16 A Yes, sir.

17 Q And that was about 12 miles away from the mill; is  
18 that correct?

19 A By road, yes.

20 Q And how far -- How far as the crow flies?

21 A From -- Between seven and nine miles.

22 Q You know, when I go to Libby, sometimes I stay at a  
23 place called the Venture Motel. Have you ever been there?

24 A Yes, sir.

25 Q You can stand at the Venture Motel and see that white

1 gash, you know, on the side of that mountain. Is that the  
2 mine?

3 A Yes, sir, it is.

4 Q Do you recall when W. R. Grace acquired Zonolite  
5 Company?

6 A Yes, sir.

7 Q What was the date of that acquisition?

8 A April 20th, 1963.

9 Q And at that time, were you still assistant manager?

10 A Yes, sir.

11 Q Who was your immediate supervisor when you became  
12 assistant manager?

13 A Raymond A. Blake.

14 Q And was he -- Did he maintain the position of manager  
15 of the mill when W. R. Grace acquired the company?

16 A Yes, sir.

17 Q For how long?

18 A Until 1968.

19 Q What happened that caused him to leave the company or  
20 to cease being manager in 1968?

21 A He died.

22 Q What did he die of?

23 A Lung cancer.

24 Q When Mr. Blake died of lung cancer in 1968, did you  
25 become manager of the plant?

1 A Yes, sir.

2 Q And was your office still at that time in the town of  
3 Libby?

4 A Yes, sir.

5 Q And was your office as assistant manager in the town  
6 of Libby?

7 A Yes, sir.

8 Q And your primary function up until that time had been  
9 in the area of accounting and business; is that true?

10 A Yes, sir.

11 Q And that was what your formal education involved,  
12 accounting, crunching numbers, that sort of thing; is that  
13 correct?

14 A Yes, sir.

15 Q And so up until 1968, it would be fair to say that you  
16 spent very little time on the mountain; is that correct?

17 A I don't know what "very little time" means, sir.

18 Q Well, you spent the vast majority of your time in the  
19 office; is that correct?

20 A Yes.

21 Q And in fact, I've seen some exhibits here, and to  
22 speed things up, I'll try to deal with it in a general  
23 way. There are exhibits here where you folks at the mine  
24 tried to differentiate between the various jobs as to who  
25 had the most dust exposure; right?

1 A Yes, sir.

2 Q Would you agree with me that the place that had the  
3 least dust exposure in the whole company was the office  
4 where you worked in the town of Libby?

5 A Might I ask when you say "the whole company," are you  
6 speaking of the Libby operation?

7 Q That's good point. I apologize. Let me change the  
8 question. Good point. As to the operations in Libby, the  
9 place in the company that had the least dust exposure,  
10 would that be the office where you worked in the town of  
11 Libby?

12 A Yes, sir.

13 Q And when you became manager of the company in 1968,  
14 how long did you hold that position?

15 A Until 1971.

16 Q What happened in 1971 that resulted in your changing  
17 your position.

18 A In 1971, there was a man brought in from another  
19 branch of the Grace organization to head up the Libby  
20 operation while they were building a new mill and getting  
21 that on stream.

22 Q Is the mine or the mountain where the mine is located  
23 sometimes referred to as Vermiculite Mountain?

24 A Yes, sir.

25 Q In 1971, you had already been diagnosed as having

1 asbestosis yourself; is that true?

2 A No, sir, that's not true.

3 Q Did you in fact have surgery for asbestos-related  
4 pleural disease in the early 1970s?

5 A Yes, sir.

6 Q When?

7 A To the best of my recollection, it was 1972 or 1973.

8 Q And it's true, is it not, that virtually all your time  
9 with the company up until that time that your lung disease  
10 was diagnosed was spent at the office in downtown Libby; is  
11 that true?

12 A Well, I must -- I must say that, again, I don't know  
13 what you mean by all of my time. I'd like to explain a  
14 little bit. For six months, approximately, in 19 -- in  
15 1946, I worked at the mine primarily as a truck driver.  
16 And after I came to work in 1948, on a full-time basis with  
17 the title of accountant and later as assistant manager, I  
18 made frequent trips to the mining and milling operation and  
19 spent time at that operation.

20 Q But I think you just testified that the vast majority  
21 of your time was spent in the office at the safest place in  
22 the company, downtown Libby; is that true?

23 A Yes, sir.

24 Q And did you have surgery to remove pleural thickening  
25 or some such thing from your lungs in the early '70s?
